Didde Graphics "Conserver" Ink Form Roller

DG-1702-J-A

The ink form roller for the Conserver press is available in two different designs. Care should be taken to identify the proper replacement for your particular case.

DG-1702-J-A: This roller is most easily identified by the 7 5/8" dimension of the end shaft.

DG-1702-J-B

DG-1702-J-B: Although this roller is similar to the roller above, it is not interchangeable. Refer to the 7 5/16" dimension to identify this roller.

"Quad Flo" Water Metering Roller

The water Metering Roller for the DG "860" is offered in two different styles. The following descriptions should clarify which style roller is correct for your particular press.

DG-860-14-A

DG-860-14-A: This version of the Quad Flo Metering Roller is best distinguished by its lack of a threaded hole in either end of the shaft. The ball bearings that are intended to fit this roller are NOT retained by a threaded fastener.

DG-860-14-B

DG-860-14-B: This roller is similar but NOT interchangeable with the roller DG-860-14-A roller above. This roller is identified by the threaded hole in each end of the shaft. After the intended ball bearings are installed they are retained by a threaded fastener inserted into these holes.

DG-860-15-A

"Quad Flo" Water Form Roller

These premium water Form Rollers for the DG 860 are available in two styles to satisfy the requirements of either the original or late model version of the Quad Flo Dampening System.

DG-860-15-B

DG-860-15-A: The "Longest" shaft projection of this "original" version of water Form Roller for the Quad Flo System should measure 2 1/32.

DG-860-15-B: In strong contrast to the DG-860-15-A roller, the longest shaft projection of this "late" model roller should measure 3 7/8".
